TERZO CLOUD

SOC 2 Audit Report

Mobile Device Management (MDM) — Mosyle Business

Report Date	Prepared By	MDM Platform
Feb 21, 2026	Praveen	Mosyle Business

.

1. Executive Summary

This SOC 2 Audit Report presents the findings from an assessment of Terzo Cloud's Apple device management environment, managed through Mosyle Business MDM. The audit was conducted on February 21, 2026, covering device security posture, compliance status, alert management, access controls, and threat detection capabilities.

The overall security posture of the Terzo Cloud device fleet is strong. All enrolled macOS devices achieve a 100% Hardening & Compliance score against 37 active security rules — significantly exceeding the industry benchmark of 53%. No malware infections or security breaches were detected during the audit period. Active alert monitoring with email notifications is in place.

24	100%	16	0
Total Devices	Compliance Score	Active Alerts	Infections Detected

Key Findings

- Device fleet compliance rate is 100%, exceeding the industry average of 53%.
- No malware or infection findings on any managed device in the last 24 hours.
- 16 active MDM alerts require attention: 7 OS updates pending, 4 MDM profiles removed, 3 license warnings, 2 connectivity issues.
- 2 devices are running significantly outdated macOS versions (macOS 13.2.1 and 15.5) — remediation recommended.
- DNS filtering, Zero Trust controls, and Admin On-Demand are configured and operational.
- Push Certificate is configured and active — essential for MDM command delivery.
- Email alert notifications are active, supporting timely incident response.

2. Organization Overview

Field	Details
Organization Name	Terzo Cloud
MDM Platform	Mosyle Business
Console URL	mybusiness.mosyle.com
Audit Date	February 21, 2026
Prepared By	Praveen M (Administrator)
Report Classification	Confidential — Internal Use Only
Device Platforms	macOS, iOS/iPadOS
Total Enrolled Devices	24 (23 macOS + 1 iOS/iPadOS)
Administrators	2 (admin - Primary, Praveen Praveen)

Scope of This Audit

This report covers the following SOC 2 Trust Service Criteria (TSC) as applicable to Mosyle MDM:

- CC6 — Logical and Physical Access Controls
- CC7 — System Operations (Monitoring & Alert Management)
- CC8 — Change Management
- A1 — Availability
- CC9 — Risk Mitigation

3. Device Inventory & Enrollment

All company devices are enrolled under Device Enrollment (DEP/ADE), ensuring MDM supervision and management from initial setup. Below is the complete macOS device inventory as of March 11, 2026.

Device Name	User	Serial Number	macOS	Storage Used	Model
mythilippriya's MacBook Pro	MYTHILIPPRIYA S G	GR242J52P1	26.3	88% (435/494 GB)	MacBook Pro 14" 2023
niranjan	Niranjan R	J73DKJ34PP	26.3	32% (161/494 GB)	MacBook Pro 14" 2024
Praveen M [Admin]	Praveen M	C02G37NBQ6L4	26.3	94% (232/245 GB)	MacBook Air M1 2020
IRONHIDE	Ajay Christopher Hubert	KP93V707J0	26.3	57% (286/494 GB)	MacBook Pro 14" 2023
GowthamVeerappan	Gowtham Veerappan	X1YJ2WGFTH	26.3	60% (299/494 GB)	MacBook Pro 14" 2021
Apple's MacBook Pro	revathi	J6R7D6Y6LF	26.3	29% (148/494 GB)	MacBook Pro 14" 2024
MacBook Pro	Divya R	LQJ326N9Y5	26.3	44% (222/494 GB)	MacBook Pro 14" 2023
dineshkumar	Dinesh	Q95WC16JDP	26.3	44% (222/494 GB)	MacBook Pro 14" 2021
hariharan's MacBook Pro	Hariharan V	P4Y43FNJWR	26.3	76% (377/494 GB)	MacBook Pro 14"
MacBook Pro (3)	Dinesh Baskaran	C7XG64K4M0	26.3	50% (248/494 GB)	MacBook Pro 14" 2021
MacBook Pro (5)	Ahamed Riyas	L043T093TR	26.3.1	57% (283/494 GB)	MacBook Pro 14" 2023
Vasanth's MacBook Pro	Vasanth Pandian	T6DP29K320	26.3	46% (232/494 GB)	MacBook Pro 14" 2021
Sowmiya's MacBook Pro	Sowmiya Sakthivel	FVFFHMRBQ05D	26.3.1	79% (195/245 GB)	MacBook Pro 13" 2020
Dinesh's MacBook Pro	Divya Murugesan	PYH4X30W36	26.3	96% (476/494 GB)	MacBook Pro 14" 2021
Dhanusha's MacBook Pro	Not Assigned	FVFFFL1UQ05D	26.3.1	41% (101/245 GB)	MacBook Pro 13" 2020
MacBook Pro (2)	Prasannakumar V	X4L9414L27	26.3	57% (284/494 GB)	MacBook Pro 14" 2023
Terzo	Mohanamala mariappan	KG4P92VL2F	26.2	63% (316/494 GB)	MacBook Pro 14" 2021

Iyyappan's MacBook Pro	Iyyappan M	WXQG52LV27	26.2	51% (254/494 GB)	MacBook Pro 14" 2021
MacBook Pro (4)	Kavipriya S	RVM9Q97FJD	26.1	43% (214/494 GB)	MacBook Pro 14" 2023
MacBook Pro (4)	Vinotha Senthilkumaran	WQWWQL65MH	13.2.1	32% (160/494 GB)	MacBook Pro 14" 2021
Shunmugavel Suriya	shunmugavel	XVGHD2R64D	15.5	79% (391/494 GB)	MacBook Pro 14" 2023
MacBook Pro (3)	Ananya M	G59R0CG61T	15.5	34% (169/494 GB)	MacBook Pro 14" 2023
iOS/iPadOS Device	(1 device enrolled)	—	—	—	iOS/iPadOS

Storage Alerts

Two devices are approaching critical storage capacity and require immediate attention:

- Dinesh's MacBook Pro (Divya Murugesan) — 96% full (476/494 GB) — CRITICAL
- Praveen M / C02G37NBQ6L4 — 94% full (232/245 GB) — HIGH
- Sowmiya's MacBook Pro — 79% full (195/245 GB) — MODERATE
- mythilippriya's MacBook Pro — 88% full (435/494 GB) — HIGH

4. Security Controls — Hardening & Compliance

Mosyle Business enforces security hardening rules through its Hardening & Compliance module. As of February 21, 2026, Terzo Cloud achieves a 100% compliance ratio across all active rules — significantly above the industry benchmark of 53%.

100%	53%
Terzo Cloud Compliance Score 37 Active Rules | 3 Control Points	Industry Average Compliance Source: Mosyle Anonymized Benchmark

Active Security Rules (SOC 2 Relevant)

The following security rules are enforced across all managed macOS devices, directly supporting SOC 2 Trust Service Criteria:

Security Rule	SOC 2 Criteria	Industry Adoption	Terzo Status
Disable the guest account	CC6.1 — Access Control	90%	ENFORCED
Enforce FileVault (Disk Encryption)	CC6.7 — Encryption at Rest	90%	ENFORCED
System Integrity Protection (SIP)	CC7.1 — System Monitoring	88%	ENABLED
Enable system security update installs	CC8.1 — Change Management	88%	ENFORCED
MDM Profile management	CC6.2 — Access Provisioning	—	ACTIVE
Push Certificate Configuration	A1.1 — Availability	—	CONFIGURED
Admin On-Demand Controls	CC6.3 — Privilege Management	—	ACTIVE
Automated Zero Trust	CC6.6 — Zero Trust	—	ACTIVE
DNS Filtering — Security	CC7.2 — Threat Monitoring	—	ACTIVE

Compliance Trend

Compliance monitoring data (last 30 days) shows that Terzo Cloud's compliance ratio jumped from near 0% to 100% between March 9-11, 2026, following rule activation and enforcement. No changes were detected since March 10, 2026, confirming a stable and compliant configuration baseline.

5. Threat Detection & Response

5.1 Detection & Removal (Antivirus/Malware)

Metric	Value	Status
Total Infections Found (last 24 hrs)	0	CLEAR
Devices Affected (last 24 hrs)	0	CLEAR
Scan Coverage	All enrolled macOS devices	ACTIVE
Detection Engine	Mosyle Detection & Removal 2	OPERATIONAL

5.2 DNS Filtering — Security

DNS-level threat blocking is active. In the last 24 hours, zero malicious, adult-content, or ad-category DNS requests were blocked, indicating clean network activity.

DNS Block Category	Blocks (Last 24hrs)	Status
Malware / Threat Sites	0	CLEAN
Adult Content	0	CLEAN
Ads & Trackers	0	CLEAN

5.3 Automated Zero Trust

Automated Zero Trust controls are active and enforce application and process trust policies. Events are monitored in real time. The last 24-hour period shows no blocked or untrusted events requiring escalation.

5.4 Admin On-Demand

The Admin On-Demand feature enables controlled privilege elevation. All requests are logged, tracked, and compared against daily averages to detect anomalous privilege usage — supporting the principle of least privilege (CC6.3).

6. MDM Alerts & Incident Management

Mosyle Business provides real-time MDM alerting across multiple categories. Alerts are delivered via email notification (currently active) to administrators, enabling timely incident response in accordance with SOC 2 CC7.3 (Event Monitoring).

Alert Type	Count	Severity
OS Update Required	7	WARNING
MDM Profile Removed	4	CRITICAL
Apps & Books Licenses Almost Full	3	WARNING
No Connection (Device Offline)	2	WARNING
Storage Almost Full	0	OK
Duplicate Serial Numbers	0	OK
MDM Approval Required	0	OK
Group Admin Without User Group	0	OK

Alert Analysis & Remediation Actions

OS Update Required (7 devices) — Priority: HIGH

Seven devices have pending OS updates. Keeping macOS current is critical for security patch management (CC8 — Change Management). Outdated OS versions may contain known vulnerabilities.

- Immediate Action: Deploy OS update command via Mosyle to all 7 affected devices.
- Note: Devices running macOS 13.2.1, 15.5 are significantly behind current version (26.3.1).
- Recommendation: Enforce automatic security update installs via MDM policy.

MDM Profile Removed (4 devices) — Priority: CRITICAL

Four devices have had their MDM profile removed, meaning those devices are no longer managed. This is a critical security finding — unmanaged devices cannot enforce security policies.

- Immediate Action: Re-enroll affected devices into MDM immediately.
- Root Cause Investigation: Determine whether profile removal was authorized or indicative of policy circumvention.
- SOC 2 Impact: Affects CC6.2 (Access Provisioning) and CC7.1 (System Operations).

Apps & Books Licenses Almost Full (3 licenses) — Priority: MEDIUM

Three application or Apple Books licenses are approaching capacity limits. This may impact device provisioning and user productivity.

- Action: Review license utilization and purchase additional licenses as needed.

No Connection — 2 Devices — Priority: MEDIUM

Two devices have lost MDM connectivity. These devices cannot receive MDM commands, policy updates, or security configurations.

- Action: Verify device status — confirm whether devices are powered on and network-connected.
- Action: If devices are lost or decommissioned, initiate remote wipe or remove from MDM.

Alert Notification Configuration

Alert Channel	Status	Recipients
Email Notifications	ENABLED (ON)	Administrators
In-Console Alerts	ACTIVE	All Administrators
Custom Alerts	Configurable	Not yet configured

7. Access Control & Identity Management

7.1 Administrator Accounts

Access to the Mosyle MDM console is restricted to two administrator accounts, implementing the principle of least privilege:

Account	Role	SOC 2 Control
admin	Primary Administrator	Full access — CC6.1
Praveen M (praveen.m@terzocloud.com)	Administrator	Full access — CC6.1

Recommendation: Review whether both accounts require full administrator access. Consider implementing role-based access control (RBAC) to limit administrative scope where possible (CC6.3).

7.2 Device Authentication

Mosyle Business enforces device authentication policies through MDM profiles. The Device Authentication module enables user-device binding, ensuring only authorized users operate enrolled devices.

7.3 Mosyle Auth 2

Mosyle Auth 2 (identity-based authentication) is configured for enhanced user verification on macOS devices. This feature supports multi-factor authentication workflows and strengthens user identity assurance in line with CC6.1.

7.4 User Enrollment (BYOD)

User Enrollment (BYOD) is available but currently shows no separately enrolled personal devices. All enrolled devices are company-owned (Device Enrollment), ensuring full management control.

8. Change Management & Activity Logging

8.1 Commands Activity Log

Mosyle Business maintains a Commands Activity Log that records all MDM commands issued to devices (e.g., lock, wipe, update, script execution). This log provides a full audit trail supporting SOC 2 CC8 (Change Management).

- All MDM commands are timestamped and attributed to the issuing administrator.
- Command history enables post-incident review and forensic analysis.
- Recommendation: Periodically export and archive the Commands Activity Log for long-term audit trail preservation.

8.2 Management Profiles

Configuration changes are delivered via MDM Management Profiles. Active profile types include:

- Install App — Application deployment
- Install PKG — Package deployment
- AirPrint — Printer configuration
- Additional profile types configurable as needed

Recommendation: Document all active management profiles with version history and change approval records to support SOC 2 CC8 controls.

9. Findings & Recommendations

Critical Findings

#	Finding	SOC 2 Criteria	Priority	Action Required
F-01	4 devices have MDM profile removed — no longer managed	CC6.2, CC7.1	CRITICAL	Re-enroll devices immediately; investigate root cause
F-02	2 devices running macOS 13.2.1 and 15.5 — significantly outdated	CC8.1	HIGH	Deploy OS update or retire devices

High Priority Findings

#	Finding	SOC 2 Criteria	Priority	Action Required
F-03	7 devices pending OS updates (26.1, 26.2 not on latest 26.3.1)	CC8.1	HIGH	Push OS update via Mosyle immediately
F-04	2 devices with critically high storage (>90% full)	A1.2	HIGH	Clean up storage on PYH4X30W36 (96%) and C02G37NBQ6L4 (94%)
F-05	2 devices offline / no connection	A1.1, CC7.3	HIGH	Verify device status; initiate remote action if unresponsive
F-06	Dhanusha's MacBook Pro has no assigned user	CC6.2	HIGH	Assign user or decommission device

Medium Priority Findings

#	Finding	SOC 2 Criteria	Priority	Action Required
F-07	3 Apps/Books licenses approaching capacity	A1.2	MEDIUM	Review and expand license pool as needed
F-08	Only 2 administrator accounts — no RBAC separation	CC6.3	MEDIUM	Consider role-based access control implementation

F-09	No custom alerts configured	CC7.3	MEDIUM	Configure custom alerts for storage thresholds and security events
F-10	Commands Activity Log not archived externally	CC8.1	MEDIUM	Establish periodic log export and retention policy

Positive Findings (Controls Working Effectively)

Control	Observation	SOC 2 Criteria
100% Hardening Compliance	All active rules enforced on all devices — above industry average	CC6, CC7
Zero Malware Detections	No infections or threats found in audit period	CC7.2
FileVault Encryption	Enforced on managed devices — data at rest protected	CC6.7
SIP Enabled	System Integrity Protection active — prevents OS tampering	CC7.1
Guest Account Disabled	Reduces unauthorized access surface	CC6.1
Email Alerts Active	Real-time notification for all MDM events	CC7.3
Push Certificate Configured	Ensures reliable MDM command delivery	A1.1
Zero Trust Active	Automated application trust enforcement	CC6.6
DNS Filtering Active	Network-level threat blocking operational	CC7.2

10. Conclusion

Terzo Cloud demonstrates a strong security foundation for its Apple device fleet through disciplined use of Mosyle Business MDM. The 100% Hardening & Compliance score, zero malware detections, active DNS filtering, and Automated Zero Trust controls reflect a mature MDM posture that exceeds industry benchmarks.

However, several operational gaps require immediate attention to fully satisfy SOC 2 requirements: 4 devices that have had their MDM profiles removed must be re-enrolled, 7 devices require OS updates, and 2 devices running significantly outdated operating systems pose a security risk.

Addressing the critical and high-priority findings identified in this report will substantially strengthen Terzo Cloud's SOC 2 control environment and reduce the attack surface of its managed device fleet.

SOC 2 Criteria	Status	Notes
CC6 — Access Control	PARTIAL	MDM profiles removed from 4 devices; no RBAC
CC7 — System Operations	COMPLIANT	Monitoring, alerts, threat detection all active
CC8 — Change Management	PARTIAL	7 OS updates pending; log archiving not confirmed
CC9 — Risk Mitigation	COMPLIANT	Zero Trust, DNS filtering, hardening enforced
A1 — Availability	PARTIAL	2 devices offline; 2 devices near storage limits
